

Finance Sustainable Development

Plan and finance flood solutions in transitioning economies.

Case Study:

Globally, catastrophic urban floods disproportionately affect the poor, women, children, and people of color, destabilizing communities, landscapes, and economies in North America, the Caribbean, Latin America, South Asia, and Africa.

Financing and engineering resilience in low- and moderate-income economies will require innovative new partnerships between governments, NGOs, investors, and A/E/C. HazelFLOOD can help maximize ROI in multibenefit flood solutions.

Build flood resilience where the risks are greatest.

Use HazelFLOOD to:

- Pressure-test cities and regions, digitally, to optimize investment in both green and grey flood infrastructures;
- Prioritize critical infrastructures;
- Safeguard vulnerable communities and landscapes;
- Deploy temporary or short-term emergency response;
- Leverage investment in green infrastructures for multiple economic, ecological, and social equity benefits;
- Attract strategic investors and partners.
