

Report + Manage Flood Risk

Stress-test your corporate climate risks.

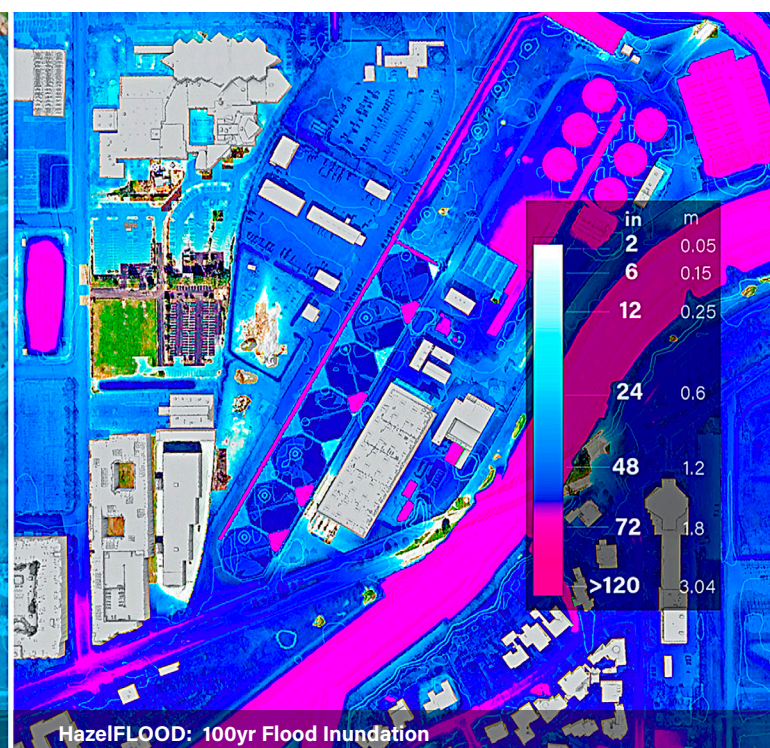

Case Study:

A competitor describes a site's flood risk as "greater than 12 inches." On the same site for the same flood event, HazelFLOOD tells you where your company has a four- to ten-foot problem.

Value destruction by flood isn't just for banks and reinsurers anymore. The world's largest publicly traded companies are vulnerable, too: 12 months after immediate flood losses, reputational damage and disrupted growth cause investors to reassess. On average, shareholder value declines 5%, dwarfing the cost of investing in flood protection.¹

1: Pentland Analytics, July 2020

Use HazelFLOOD to benchmark true climate risk:

- Rapidly and accurately account for changing levels of risk in purchase/sale agreements;
- Report with confidence in voluntary or mandated reporting, including ESG compliance;
- Manage risk proactively;
- Prevent physical losses as well as loss in shareholder value.

Report, assess, and manage flood risk with confidence.
